WHY

# UNDERSTANDING GAMIFICATION

# What is Gamification?

In 2002 the term gamification was officially coined, but prior to that experts vary on how much the concept was applied to engagement strategies

Gamification is the application of game-design elements and game principles in non-game contexts

The game can be digital, so in the form of an application, or non-digital, when used during classes and included into curriculum programmes

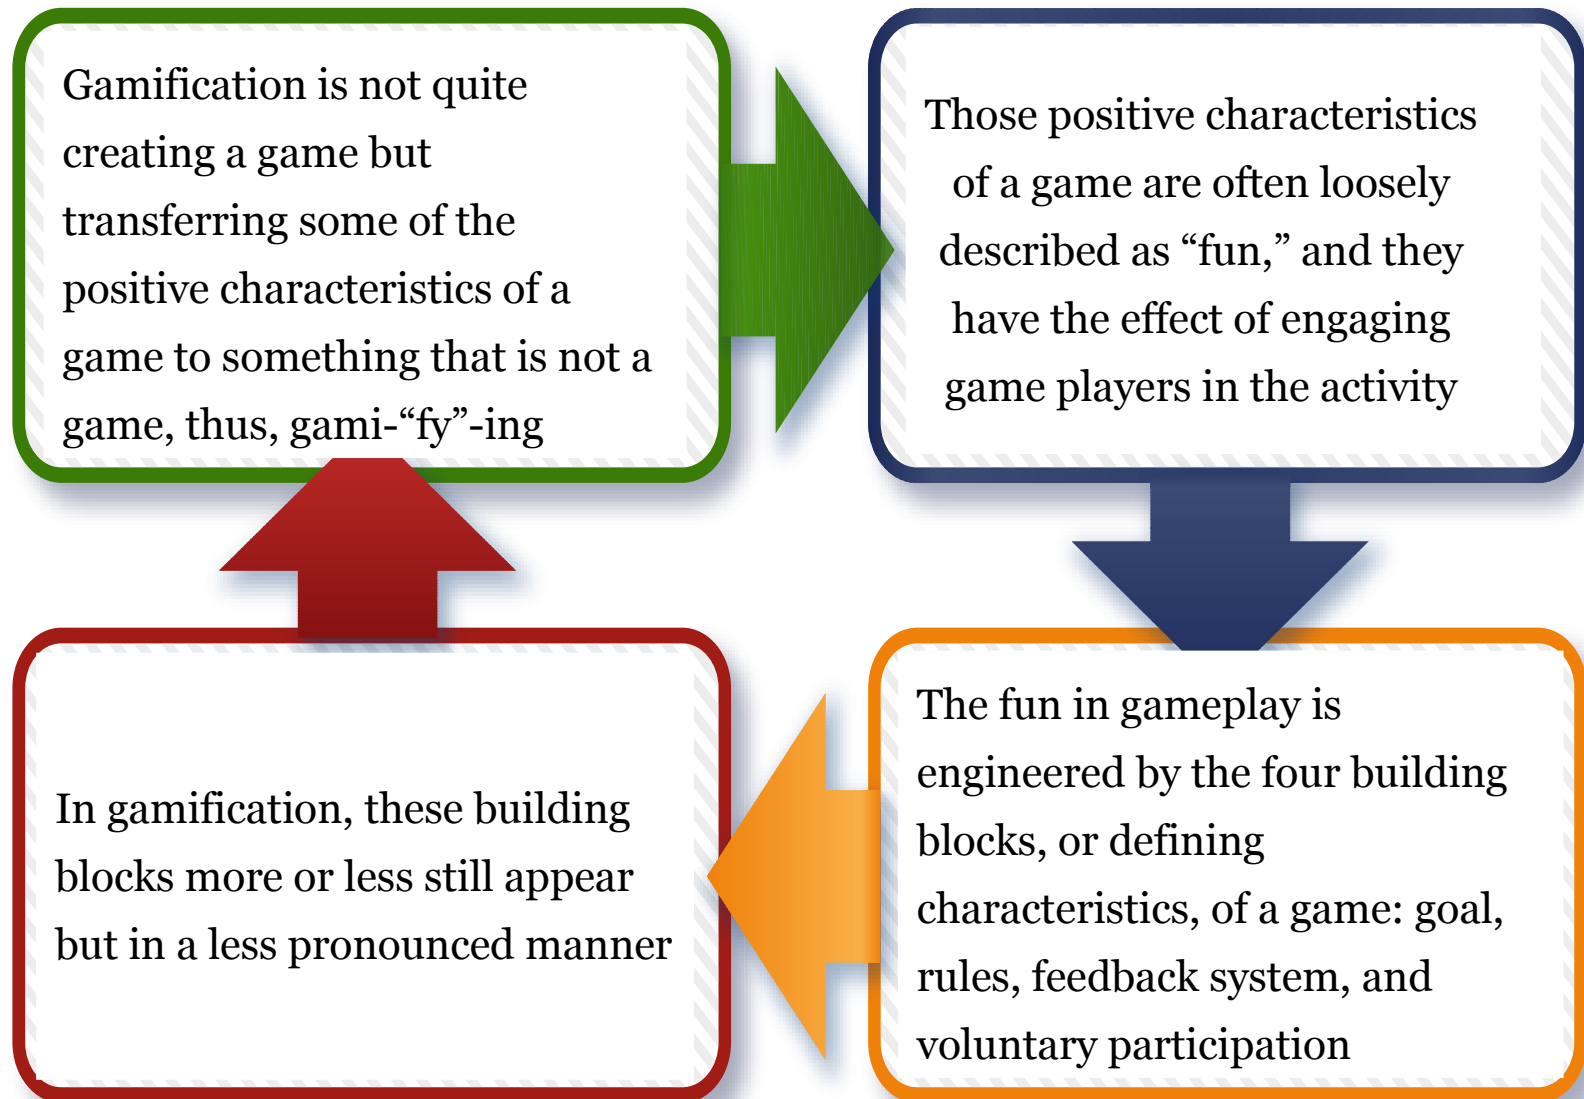

The main goals of gamification are to enhance certain abilities, introduce objectives that give learning a purpose, engage students, optimise learning, support behaviour change, and socialise

Gamification tends to appeal to the following needs:

- ♦ Rewards
- ♦ Progress
- ♦ Competition
- ♦ Recognition and status.
- ♦ Altruism
- ♦ Fun

# Game & Gamification

Gamification has some similarity to games, but they are not exactly the same..

# Gamification Vs GBL

## GAMIFICATION

VS

## GAME BASED LEARNING

The point is to motivate people to take some action and learn and do something.

Usually game-like features are added to the LMS or any other system rather than the content.

Being intrinsically rewarding is optional.

Is usually easier and cheaper.

The tasks have points or some form of reward.

The point is to motivate people to take some action and learn as an end result.

Content is usually modified to fit the story and scenes of the game.

Playing the game is intrinsically rewarding.

Is usually hard and expensive to build.

Games have defined learning objectives.

# Avoiding Common Pitfalls of Gamification in Education

*✗ The positive effects of gamification occur more when teachers prioritise intrinsic motivation as they plan learning activities*

# 5 Gamification Strategies

---

1.

Instead of class worksheets, assign students “quests” to learn about a new subject or complete a project

2.

Use team-building games like Jeopardy to study as a class before a test

3.

Instead of class parties or treats, have students earn points towards a class field trip by behaving and doing their assignments.

4.

Pair subjects that a student struggles with or dislikes with fun books or activities to encourage motivation

5.

Talk with them together or individually about what motivates them as a student and incorporate it into the student engagement strategies

# GAMIFICATION EXAMPLES IN EDUCATION

## Kickstarter

An American crowdfunding platform has launched a campaign on Canny bot - a robot toy that can be controlled remotely via a programme and is used to teach children practical coding skills.

## Quizlet

A web and mobile application to study Math, Science, Languages, Arts quicker via games and flashcards for free. It's used by half of the universities of the USA and is said to help with progress a lot.

## Khan Academy

Designs interactive video short lessons and supplies users with practice exercises and additional materials for creative learning of different subjects at their own pace.

## Duolingo

Language-learning game with more than 8 millions downloads on Google Play. The social app encourages to level app earning points, get virtual currency and learn with friends.

## ClassDojo

An interactive, funny and practical solution that connects children with teachers and helps create and manage better learning via virtual classes, sharing media and messaging.

## Kahoot

A solution to use at school and at work for e-learning. While playing, anyone feels more comfortable and confident in vocabulary quizzes, multiplication, geography and more.
